Grow your own beanstalk

Directions:

- 1. Cut or tear one sheet of paper towel in half.
- 2. Fold to fit in plastic bag. Soak the paper towel in water before placing in the bag.
- 3. Put two or three beans about 1 1/2 inches apart, from the bottom of the bag Make sure the beans are not sitting in the water.
- 4. Seal the bag part way Leave a slight opening so the growing plants get oxygen.
- 5. Tape the bag to a window. Beans should face inward so you can watch them grow.
- 6. Once your beans start sprouting to the top, you can plant them in the ground. Reuse the bag for another project.

What you need:

• water

ര

0

- paper towels
- dry, uncooked beans or seeds
- plastic storage bag
